Subject:	Add xml USE to vlc		

Description:	As in title. I just discovered that I couldn't open directories with audio files. Vlc in console just popups these errors on trying to open directory
	<pre>
	[00007f03a0008af8] core xml reader error: XML reader not found
	[00007f03a0010488] core xml reader error: XML reader not found
	</pre>
	
	After a while I read here https://forum.videolan.org/viewtopic.php?t=108033 that xml support is needed. I compiled vlc with xml USE and it worked, I could play files from directory. So I think that this USE should be enabled by default, so other won't be bitten by that.

Hi Tomasz,

Added a flag, thank you.
