| Subject: | Enable subpixel rendering by default (fontconfig) | | |
| Description: | <pre><pre> eselect fontconfig enable 9 13 eselect fontconfig list (...) [9] 10-sub-pixel-rgb.conf * [13] 11-lcdfilter-default.conf * (...) <logout and login> </pre> This results in much better looking fonts than in default setup without it. Maybe would be good idea to enable it by default in every install.</pre> | | |

I couldn't edit original issue post so I will post next one that is correct.

??This results in much better looking fonts than in default setup without it. Maybe would be good idea to enable it by default. -in every install.-??

Hi Tomasz,

Added settings.
