Subject:	[make stage] Not enuf space for OOo		
Description:	There is an alternate partition in use when doing "calculate -{c,D,m}". Desktop versions of CL have it as 10G in size. There is not enough much space for compiling OpenOffice in case of CLD. It needs no less than 6G but ~5,9G available only. As of it, one forced to bind _/mnt/builder/var/calculate/tmp_ to _/var/calculate/tmp_ by hand. */dev/sda5* is usually a much bigger (mine's 200G) than */dev/sda{2,3}* for desktop systems. So, why not to do all stages in _/var/calculate/tmp/something_ instead?

Auto partition the new installer is not yet supported. The new decision will be several partitioning schemes.
