Subject:	Remove Kopete and Konqueror from «the box»		
Description:	I would suggest to remove Konqueror and Kopete from the default installation of Calculate because: â€” Konqueror is not necessary when there is Firefox and Dolphin already installed; â€” Kopete is quite buggy and awkward and can be successfully replaced by qutIM, for example. Also, this pair of software often results in endless running of Konqueror when you click on a link in Kopete.		

History

kopete supports a variety of protocols.

konqueror can again become the default browser.
