Subject:	Add grub-install-option for installer		
Description:	In multiHDD configurations GRUB installs on first HDD, even if you install system on a second disk, and trying to boot from it. For peoples who have windos OS on a first HDD its will be not necessary install GRUB for its OS. And not need to recovery ntloader by them. In my configuration I tried to boot from second disk but failed, only when I tried to boot from first, I seen loader :) But in documentation this situation was not described.
