Subject:	Emerge -DuN world fails (dev-libs/icu-4.4.1 and net-news/liferea-1.7.4 conflict)		
Description:	In order to bring CLDG-10.4 up to date (as far as the calculate overlay and Gentoo's portage mirrors are concerned), I had to mask icu-4.4.1. That was the easiest solution. The problem is that liferea uses libicuuc.so.42 and so requires an icu-4.2.* version be installed. Perhaps a better solution would be to not use liferea - since I think it is the problem package.
