Subject:	Customizing LDAP tree		
Description:	I propose make at least root of LDAP tree configurable over .conf files or other method. For example /etc/calculate/calculate.env Very nice if all tree be configurable over any static method (not from parameter of command line).

Unable to change only one file the root of LDAP, this will entail changes in many configuration files.

10/26/2010 01:51 pm - Dmitry Fomenko

I`m understand this. I propose change this "many configuration files" so that they read parameter "name_root_of_LDAP_tree" from the configuration file.

Call at least one reason why it should be done.
