Ð¢ÐµÐ¼Ð°:	Target "ALL" for operation with users		
ÐžÐ¿Ð¸Ñ•Ð°Ð½Ð¸Ðµ:	Request subj. There is a often necessary to add the user to all (active and configured) services. Now i need add the user in services separately. The same situation with delete tje user from all services. Can you add target ALL to parameters cl-userdel and cl-useradd utility. Thank you.

Instead of cl-useradd command with the name of the service will use separate commands packages calculate-samba, calculate-ftp, etc. Common configuration commands for all services in the Calculate Utilities 2.2 will not.
