That trouble isn't occur all systems;

For example my system:

```
CLDX, time mount /dev/cdrom /mnt/cdrom && time umount /dev/cdrom
```

```
real 0m4.041s
```

```
user 0m0.000s
```

```
sys 0m0.005s
```

```
real 0m0.002s
```

```
user 0m0.001s
```

```
sys 0m0.001s
```

If cd is already been in cdrom

```
time mount /dev/cdrom /mnt/cdrom
```

```
real 0m2.684s
```

```
user 0m0.000s
```

```
sys 0m0.009s
```

But if I put cd to cdrom & mount immediately I have

```
time mount /dev/cdrom /mnt/cdrom
```

```
real 0m53.325s
```

```
user 0m0.000s
```

```
sys 0m0.011s
```

If I mount by KDE I waiting more time.
