Subject:	NetworkManager doesn't start - problem after update		
Description:	After an update I have found NetworkManager to be absent from runlevel default. Later I have added it manually via "rc-update add NetworkManager default", but KDE still doesn't display NetworkManager tray icon (it IS enabled in the tray settings), while network is up again.

Reinstalling of kde-misc/networkmanagement, and re-adding it to tray solves the last part of the issue.
