Subject:	Calculate Linux Desktop Installer Fails to Automated Partitioned		
Description:	When automatic partitioned is selected, calculate Linux 13.6 says random numbers like 22gb, 57gb is needed. [[http://i.imgur.com/gmP76ep.png]]		

History

The error is caused by a empty field "Root Partition Size (MB)" in the installer.

If the field is empty the *auto* partitioning no auto complete the / required and show a random number for a full installation in the HDD. Completing with 7200 the installer continue the process

How much memory on your computer?

Root size is 8Gb by default. If you choice additional root and swap then 16Gb + memory size.
