```
xorg.conf
<pre>
# Rebuild all X11 modules (mostly useful after xorg-server ABI change).
[x11-module-rebuild]
class = portage.sets.dbapi.VariableSet
world-candidate = false
variable = CATEGORY
includes = x11-drivers
</pre>
touchpad.conf Д½Дµ Д½Д°Њ°ДµД»
Д½Д°Њ°ДµД» 50-synaptics.conf
<pre>
# Example xorg.conf.d snippet that assigns the touchpad driver
# to all touchpads. See xorg.conf.d(5) for more information on
# InputClass.
# DO NOT EDIT THIS FILE, your distribution will likely overwrite
# it when updating. Copy (and rename) this file into
# /etc/X11/xorg.conf.d first.
# Additional options may be added in the form of
# Option "OptionName" "value"
#
Section "InputClass"
    Identifier "touchpad catchall"
    Driver "synaptics"
    MatchIsTouchpad "on"
# This option is recommend on all Linux systems using evdev, but cannot be
# enabled by default. See the following link for details:
# http://who-t.blogspot.com/2010/11/how-to-ignore-configuration-errors.html
# MatchDevicePath "/dev/input/event*"

```
