

Calculate Linux - Bug # 644: Couldn't login from kdm

Status:	New	Priority:	Urgent
Author:	Thoralf Söldenwagner	Category:	Calculate Linux Desktop KDE
Created:	04/19/2014	Assignee:	
Updated:	04/24/2014	Due date:	
Subject:	Couldn't login from kdm		
Description:	<p>Hi there,</p> <p>first of all, thanks for this fine distro!</p> <p>Secondly, I couldn't login after installation. After doing some research I was able to fix the issue.</p> <p>In /usr/share/config/kdm/Xsession I had to replace line 71 with:</p> <pre>exec /usr/bin/startkde</pre> <p>This might a problem (and a "Good bye Calculate")for all new users.</p> <p>Cheers</p> <p>TS</p>

What stage you used to install?

What disk layout used?

How about free space on hard drive?

04/23/2014 11:50 pm - Thoralf Söldenwagner

Hi there,

as I said, I installed from DVD (following the instructions), don't know, which stage it is.

My disk layout is very simple:

/dev/sda{1,2,3} for /, /home and swap

This is from df -h:

```
root ~ arrakis
Dateisystem  Größe Benutzt Verf. Verw% Eingehängt auf
/dev/sda2    33G   9.6G  22G  31% /
udev         10M    0 10M   0% /dev
tmpfs        376M   1.1M 375M   1% /run
cgroup_root  10M    0 10M   0% /sys/fs/cgroup
shm          1.9G    0 1.9G   0% /dev/shm
/dev/sda3    75G   26G  46G  37% /home
```

Hope that helps and greetings from Hamburg

What session chosen on kde? Must be default. What in ~/.dmmrc?
