<b>Subject:</b>	cl-update : 3 versions for criticals packages.		
<b>Description:</b>	<p>Hi Team Calculate,</p> <p>Is it possible to add in the cl-update tool an option to keep (example 3 packages' version) for critical packages as calculate-sources ?</p> <p>Indeed, if I update the kernel, the previous version will be removed after. If at the reboot, I have a kernel panic (caused by a mismatch detected by the kernel developers) I can't select on GRUB an other kernel (the previous for example).</p> <p>I don't know if this is possible without too many constraints.</p> <p>Thanks</p>
