Subject:	You need a disk with a GPT table for install on a btrfs partition		

Description:	I get this error message when trying to install on a BTRFS partition on a MBR disk:
	
	"You need a disk with a GPT table for install on a btrfs partition"
	
	I edited this script and commented out this if statement to test it and see if it was really true:
	
	/usr/lib64/python2.7/site-packages/calculate/install/variables/disk.py:
	
	""" if tableOnBootDisk == "dos" and useBtrfs:
	            raise VariableError(_("You need a disk with a GPT table for "
	                        "install on a btrfs partition")) """
	
	My install went without incident with this modification, with MBR disk and btrfs /
