Subject:	key combinations with AltGr not working		
Description:	On standard German keyboard layouts some symbols such as @, {, [,\ can only be typed, when holding the AltGr key. After installation it is not possible to type these characters with such keyboards (even when choosing the right keymap de-latin1). It seems AltGr is completely ignored. After removing the "grp:switch" XkbOption in /etc/xorg/xorg.conf.d/keyboard.conf, this issue is gone for me.
