Subject:	/etc/wgetrc proxy settings from template block any use of proxy if no proxy during install
Description:	The template:
	/var/lib/layman/calculate/profiles/templates/3.3/3_ac_install_live/1-merge/net-misc/wget/wgetrc
	has:
	# Calculate format=dovecot
	passive_ftp = on
	waitretry = 10
	http_proxy = #-os_install_proxy-#
	ftp_proxy = #-os_install_proxy-#
	#?os_install_proxy!=#
	use_proxy = on
	#os_install_proxy#
	which, if the original install didn't use a proxy, results in /etc/wgetrc having:
	http_proxy =
	ftp_proxy =
	which overrides any setting of these variables in the environment.
	Perhaps the template should be:
	# Calculate format=dovecot
	passive_ftp = on
	waitretry = 10
	#?os_install_proxy!=#
	use_proxy = on
	http_proxy = #-os_install_proxy-#
	ftp_proxy = #-os_install_proxy-#
	#os_install_proxy#
	This caused me a great deal of pain in trying to track down why wget invoked by emerge with a proxy set in the environment paid no attention to that proxy setting. I needed a proxy to work around a temporary network connectivity issue.

This seemed pretty straightforward to me. Is there some good reason why the override behavior needs to be forced?
