Subject:	CLD 10 is affected by KDE 4.3.3 bug: kio_thumbnail eating memory up really quick (memleak)		
Description:	<p>To reproduce, you need stock CLD 10 system installed.</p> <p>I don't know if it may affect this, but you can try open some folder in Dolphin, with any pictures or video, and make sure you have watched thumbnail ONCE.</p> <p>On my system it happens even if I don't open any such folder, I have show miniatures OFF now. Does not help. After 6 hours running, I had kernel reload kde4.</p> <p>Effect: System may crash(reload kde4init), because kio_thumbnail eats up ALL memory.</p> <p>Bug is known, see this: https://bugs.launchpad.net/ubuntu/+source/kdebase-runtime/+bug/289338</p> <p>I also attach two files: one with dmesg log when kio_thumbnail gets killed(together with current kde session), another one is image of htop with kio_thumbnail eating 4Gb of memory(and growing).</p> <p>This is not special bug of Calculate, but of KDE 4.3.3, please close it once its fixed upstream. :(</p>

Error isn't repeated in KDE 4.5.5?

01/31/2011 11:10 am - Alexander Tratsevskiy

- Status changed from New to Closed

03/01/2011 10:11 pm - Vladimir Berkut

Hello Alexander!

I'm using Gentoo now, not Calculate, but will switch very soon back =)

So.. It is resolved in KDE >4.5.3

really closed
