Updated:	11/13/2015	Due date:	
Subject:	CLDX 15 ISO /home/guest is owned by root:root		
Description:	Attempt to ssh into the LiveDVD after setting a password will hang if X11 forwarding is requested because xauth waits when it cannot create a link to lock .Xauthority before modifying it.		
	Fixing ownership of /home/guest manually	v works around t	thic
	Fixing ownership of /home/guest manually works around this.

OK. It turns out that this was because the graphical interface hadn't been coming up.

I had been having problems getting the graphical interface to come up and it appears that the permissions get adjusted when that happens because the permissions are good if I look after the GUI screen comes up.

Probably not a big deal, but would be handy if this were taken care of when /home/guest gets created initially.
