<b>Subject:</b>	www-client/firefox : Segfault sometimes		
<b>Description:</b>	<p>Hi team Calculate,</p> <p>I have a problem with "www-client/firefox" Sometimes, Firefox crash (i think it's javascript).</p> <p>I tried to launch Firefox in console and I just have the "Segfault error".</p> <p>I tried reset my profile and launch firefox without extensions : same problem.</p> <p>I unmerge www-client/firefox and emerge www-client/firefox-bin, with the same profile, no problem.</p> <p>Do you have the same problem and can you fix it ?</p> <p>I don't know how to help you...</p> <p>I use CLD 64bits. www-client/firefox with default USE FLAG by calculate.</p>		

### History

#### 01/09/2016 11:43 pm - Alexander Pilipenko

Try to build with USE="debug" and launch in console

#### 01/11/2016 03:22 pm - Alexander Pilipenko

you have tried disable flash plugin?

#### 01/11/2016 07:58 pm - Adrien Duck

I didn't install flash.

I try debug option.

With debug FLAG it's very difficult to surf on the Internet.

When I click on a link, the page is displayed 3 or 4 seconds after ... it's very long and i can't use Firefox with that.

Each time I click on a link, some lines displayed on my console :

<pre>

**01/12/2016 09:15 am - Alexander Tratsevskiy**

Recently I began to use Firefox on Android. Yes, he occasionally falls! )

**01/15/2016 06:55 pm - Alexander Frolov**

I have similar issue with @www-client/firefox-43.0@ (marked as @~arch@): random crashes, sometimes during video (no flash plugin), sometimes on pages with infinite scrolling. Version from package @www-client/firefox-bin-43.0@ seems to work fine.

Similar issue: <http://www.calculate-linux.ru/issues/827>

**03/25/2016 10:04 am - Adrien Duck**

I found the solution :

In about:config :

layers.offmainthreadcomposition.async-animations -> false

layers.offmainthreadcomposition.enabled -> false

USE :

www-client/firefox -system-cairo

- Status changed from New to Feedback

Thank you, Adrien! With the corrected flag seems to be no problem.
