Subject:	app-i18n/nabi nabi-0.99.11 has an known bug against Colemak kbd layouts		
Description:	<p>First of all,</p> <p>Thanks a million for Calculate team to make such a decent distribution. I dumped Windo\$ X for Calculate Linux on my office laptop(CLDM, Mate), found a minor issue on Nabi, a simple Korean hangul X method</p> <p>Problem description: I installed app-i18n/nabi through emerge, but I found its version is pretty old. It has a known problem when it's involved with Colemak keyboard layout. Its mapping table is wrong(I communicate with the App author, then he fixed it)</p> <p>Resolution: Thankfully it got fixed with latest stable version, 1.0 The stable version 1.0 was out long ago, Jan 26, 2013 Here is the link to it, http://nabi.googlecode.com/files/nabi-1.0.0.tar.gz</p> <p>Updating to the stable version is enough to fix it, no extra effort is required, I think.</p> <p>Oh the day before yesterday, it was Hangul day. https://en.wikipedia.org/wiki/Hangul_Day</p> <p>Thanks and regards, A happy user from S.Korea</p>

Hi,
It would be better if you write the package maintainer.
We, in turn, add a package to the binary repository.

10/14/2016 04:40 pm - woody jeon

Hello Alexander,

I've contacted the maintainer, he managed to get the stable nabi-1.0 to gentoo portage (repo/gentoo.git)

<https://packages.gentoo.org/packages/app-i18n/nabi>
<https://gitweb.gentoo.org/repo/gentoo.git/tree/app-i18n/nabi/nabi-1.0.0.ebuild>

Would you please add this the binary repository.

Thanks and regards,
woody
