Subject:	Default group at installation		
Description:	<p>Hi team Calculate,</p> <p>When you install CL with GUI installer, and rename the first user account from guest to adrien for example, after installation the first user is in group "guest" and "adrien".</p> <p>guest group is useless and primary group has GID 1001 (adrien) instead of 1000 as others distributions.</p> <p>Is it possible to delete guest group for primary user and the GID = UID ?</p> <p>Thanks</p>
