Subject:	Default group at installation	
Description:	Hi team Calculate,	
	When you install CL with GUI installer, and rename the first user account from guest to adrien for example, after installation the first user is in group "guest" and "adrien". guest group is useless and primary group has GID 1001 (adrien) instead of 1000 as others distributions. Is it possible to delete guest group for primary user and the GID = UID?
