Subject:	On resuming from suspend, screen brightness is getting reset to max level
Description:	*Hi everyone*

While resuming from suspend, system is setting screen brightness to max available level, even if it was previously set to minimal

If it matters, I had installed

* https://github.com/dywisor/tlp-portage
* https://github.com/antipatico/backlight-openrc

How to reproduce
Suspend laptop using GUI
Resume laptop
Screen brightness is getting reset to max value

Expected behavior
Screen brightness should be on same level as before suspend

I tested this with:
* Current updated plasma install
* Calculate Linux 17 plasma liveCD session
* Calculate Linux 17 xfce liveCD session

Laptop spec's
* HP ProBook 4530s
* i3 2310m
* Intel GPU
* 4GB+4GB RAM
* Battery is not plugged in

History

I accidentally discovered same bug, while I was testing another distro (LiveCD) with 4.9.20 kernel.

On my Calculate-linux installation, I'm currently using binary with 4.9.17-calculate kernel.
